

Farmers, Growers & Gardeners 2015 Biochar Experiment

The Farmers, Growers and Gardeners Biochar 2015

Coventry University and Garden Organic are running another Farmers, Growers and Gardeners Biochar Experiment for 2015.

Biochar is charcoal used as a soil amendment. For this research we are trying to establish the effect of biochar on crop yield grown in different soil types across the UK through a citizen science experiment. Many of you will have joined us for the 2014 experiment. This year we will be sending out packs to run the experiment again, or we can send just the seeds and record sheets so participants can run the experiment on last years' biochar plot to see what effect one year old biochar has.

Please tick to tell us which experiment you would like to join;

- I'd like to run the experiment again on my old biochar plot - just send me seeds please.
- I'd like to run a new experiment - send me seeds and biochar please.
- Both.
